

Operated at the horse's head, which ensures safety

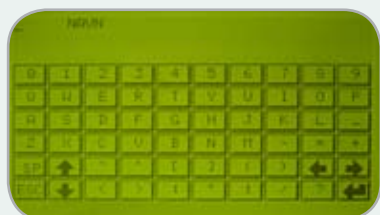

Pre-programmed with 10 fixed programs

The display shows speed, remaining time, and belt inclination

Programs up to 100 individual programs

Can register up to 100 horse names in the register

A Genius Aid

HORSE-TRAINER WALK has for years turned out to be market leading within training aids, whether it is used for training or preparation for a contest or for retraining a horse after an injury. The many unique solutions of the HORSE-TRAINER WALK make it indisputably the most safe and thus optimum solution for your horse.

One of the best in the world, if not the best!!!

HORSE-TRAINER WALK is a training machine for horses. It can be used both in the professional training stable, by the ambitious elite rider, at the riding school, by hobby horse riders as well as the horse breeder's with many young horses.

International veterinary congresses have tested this alternative training method thoroughly and say: "It is a perfect solution for building up the swing of the horse's back, its carrying capacity, and balance. It turns out that at least 75% of the swing of the back is lost, when saddle and rider get on a horse." Furthermore, measurements show that horses after months of stable rest are retrained within three weeks.

Touch display

HORSE-TRAINER WALK is computer controlled and operated at the head of the horse thus ensuring top safety, and that the introduction to a new horse to the machine is safe and easy, whether it is an unbroken youngster or a scrap racehorse.

The machine has been pre-programmed with 10 fixed programs, which are controlled from the control box by means of a finger touch display. These 10 programs have different lengths of time and incline variations. (Up hill work). These programs cover 85% of all training needs.

The computer can furthermore be programmed with up to 100 individual programs.

The variable adjustable speed makes it easy to operate and makes it possible to adjust the speed from 0 to 15 km/h. The speed must be tailored to the individual horse's pace to make the best possible use of it.

During operation, status of speed in km/h, remaining time of the running program, and belt inclination (up hill work) in degrees are displayed.

The computer can register up to 100 horses in the name register.

HORSE-TRAINER WALK

HORSE-TRAINER is provided with 3 emergency stop buttons

Adjustable safety rear bar

The stumble protection can be adjusted from 135-175 cm

Can be equipped with weighing cells

Can be provided with maintenance-free roof

Can be mounted with coin box

HORSE-TRAINER is also available for single-phase electricity 240 VAC +N+PE - 32A

HORSE-TRAINER WALK is incredibly reliable, and the machine has been fully electroplated, which makes it resistant to rain, snow and bad weather. HORSE-TRAINER are easy to maintain. We have treadmills installed at yards in north Sweden with winters where snow and minus degrees down to -25°C is everyday life, and in Dubai with dust, heat, sun and degrees above 45°C . HORSE-TRAINER works everyday under these conditions. These machines are installed outdoor, only provided with the maintenance-free roof for HORSE-TRAINER, making this solution easy and space saving.

Safety

The safety of the HORSE-TRAINER WALK is in top and it is one of the, if not the safest on the market. 3 emergency stop buttons have been mounted on the machine allowing the belt to be stopped both easily and fast.

The adjustable safety rear bar can be operated from the outside of the machine. The rear bar enables the computer to measure whether the rolling resistance increases. If so, the belt will stop and restart after 10 seconds.

The stumble protection is a photocell that can be adjusted to the height of the horse's back. It is adjustable from 135 to 175 cm. If a horse should stumble, the stumble protection will be released and the belt will stop immediately.

HORSE-TRAINER WALK is manufactured according to current regulation, and complies with EU directives and harmonized standards. HORSE-TRAINER products are of course CE-approved.

Additional Equipment

HORSE-TRAINER WALK can be equipped with weighing cells. The computer remembers the three last weighings, which are displayed. The machine can be provided with maintenance-free roof. The HORSE-TRAINER treadmill can be mounted with coin box and optional mounting of pulse computer.

HORSE-TRAINER TROT is also available as a trot model, where the speed is up to 40 km/h.

Specifikationer:

Machine dimensions	375L x 140W x 220H cm
Full length installed	635 cm
Weight	1530 kg
Lifting height max.	10 degrees
Variable adjustable speed	0-15 km/t

Electrical data:

Rated voltage	3 x 400VAC+N+PE 50 Hz
Rated current	16A
Protection class	IP 52
