

An Extreme Aid

HORSE-TRAINER WATER is one of the best water treadmills available for horses all over the world.

For regular conditioning of your healthy horse and faster healing of your injured horse.

HORSE-TRAINER WATER is a training machine for horses. It can be used both in the professional stable, by the ambitious elite rider as well as for rehabilitation of horses.

The HORSE-TRAINER WATER is a unique water treadmill allowing horses to be exercised at walk speeds, in any height of water up to around shoulder height.

The benefits of the water treadmill are increasing the buoyancy of the horse and thus reducing weight bearing and concussion on the limbs as well as providing a resistance to limb movement.

The resistance of the water appears to induce specific gait modifications at different water heights, and these modifications can be incorporated into the rehabilitation programmed.

International tests on this alternative training method show that "it is a perfect solution for accelerated conditioning, improved performance, promotes correct posture and a balanced gait, improves the heart function, enhances muscle development and improves flexibility." Furthermore, measurements have shown that rehabilitation on the water treadmill reduced the recovery time by 50-60%.

Operated at the horse's head, which ensures safety

Touch display

HORSE-TRAINER WATER treadmill is computer controlled and operated at the head of the horse thus ensuring top safety.

The machine has been pre-programmed with 10 fixed programs, which are controlled from the control box by means of a finger touch display. These 10 programs have different lengths of time and incline variations (up hill work).

The computer can furthermore be programmed with up to 100 individual programs.

The variable adjustable speed makes it easy to operate and makes it possible to adjust the speed from 0 to 11 km/h. The speed must be tailored to the individual horse's pace to make the best possible use of it.

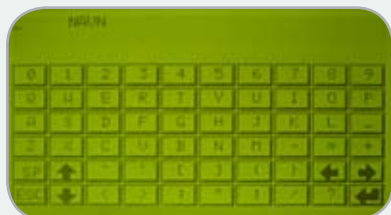

During operation, status of speed in km/h, remaining time of the running program, and belt inclination (up hill work) in degrees are displayed.

On the display, you can easily control water to and from the tank.

The computer can register up to 100 horses in the name register.

Automatic water control via display

Registers up to 100 horse names in the register

HORSE-TRAINER WATER

The water treadmill is provided with 3 emergency stop buttons

Adjustable safety rear bar

Stumble protection

HORSE-TRAINER WATER can also be used without water and adjusted for up hill work

Rehabilitation, Strength, Fitness, Conditioning

Whether it is about rehabilitating an injury or preparing for the performance of a lifetime, HORSE-TRAINER WATER is the answer!

The HORSE-TRAINER WATER provides the same low impact environment as swimming, but keeps the horse in the correct position for its ground gaits. This entails that all of the soft tissue-muscles, tendons and ligaments are exercised and built up the same way as by ground work, however without the impact.

HORSE-TRAINER WATER is incredibly reliable and the machine is produced in stainless steel.

Safety

The safety on the HORSE-TRAINER WATER is in top and it is one of the safest on the market. 3 emergency stop buttons have been mounted on the machine allowing the belt to be stopped both easily and fast.

The adjustable safety rear bar can be operated from the outside of the machine.

The stumble protection is a photocell that can be adjusted to the height of the horse's back. It is adjustable from 135 to 175 cm. If a horse should stumble, the stumble protection will be released and the belt will stop immediately.

HORSE-TRAINER WATER is manufactured according to current regulations and complies with the EU directives and harmonized standards.

HORSE-TRAINER products are of course CE-approved.

HORSE-TRAINER WATER can be used without water. It has clear doors and viewing windows. The exercise chamber can be filled and drained in 5 minutes.

Why water?

Reduced weight bearing of 40-60% - joint decompression
Reduction of friction between articulating joints - soft tissue mobilization

Reduced impact on limbs - modulation and reduction of pain
Hydrostatic pressure to assist blood circulation and reduce swelling

Specifications:

Machine dimensions	400L x 160W x 220H cm
Full length installed	640 cm
Weight	1530 kg
Lifting height max.	10 degrees
Variable adjustable speed	0-11 km/h

Electrical data:

Rated voltage	3 x 400VAC+N+PE 50 Hz
Rated current	16A
Protection class	IP 52
